PER DAY

A HUNDRED VISITORS

Shares of entries; reading depth from “Home”, the most-read page.

The way of a hundred visitors

Where they came from, which page they entered, and how the visit ended — in proportion to the counted sums.

WHERE DO THEY GO NEXT?

Circles: pages, sized by page views, the number = entries; lines: internal moves, thicker = more. A blue ring marks a page with conversions.

How far do they read — and where do they stop?

Each column is a page, top to bottom. The brighter a section, the more of the page's readers reached it; the amber mark is where the biggest share of departures happened.

Left figure: share of the page's views that reached the section. Right figure: share of the page's departures that happened there.

HOW GAZE COUNTS

Without cookies: a page loaded twice counts twice. Entries are views that did not come from another page of this site; page views count every page. Bots and excluded browsers do not count. Conversions are goal events and views of goal pages; their source is carried over internal links from the entry, without storage. “Stop” is the deepest section a person had on screen when the page was closed. No IP, no user agent, no visitor identifier, no text, no input — sums only.
